

JET SKI PORTS (PLATFORMS)

DESCRIPTIONS

The jet ski port (platform) is designed for two-, three- and four-person water scooters, it has two rollers under the keel and eight rollers under the bow. It has a handle for attaching a scooter and holes for a winch. It is possible to attach the port to the platform with either its front or its side. The port has a modular structure, consisting of 3 main parts in the standard version. Its modular design allows the port to be expanded and scooters to be parked one behind the other. The port is made of polyethylene – a durable material, resistant to corrosion and mechanical damage. Properly profiled structure and inrun rollers provide a stable support for the scooter. The upper surface of the port is non-slip.

The port has adjustable **rollers**:

SPECIFICATIONS

NO.	SPECIFICATION	VALUE
1	Overall dimensions	L 400 cm x W 148,5 cm x H 32,5 cm
2	Weight	165 kg
3	Maximum load	770 kg

JET SKI PORT CONNECTORS TO THE PLATFORM

ADVANTAGES

- Convenience of use:
 - ✓ Protecting your scooter from damage during mooring, loading or transport
 - ✓ The user has easy access to the scooter
 - ✓ Makes it easier to keep the scooter clean
 - ✓ It allows you to check the technical condition of the scooter without taking it out of the water
 - ✓ It has rollers to facilitate the descent and entry of the scooter
- Security
- Easy assembly and disassembly
- Easily disassembled transport (3 parts)
- Possibility of extension (increasing the length by using additional modules)
- Long service life
- Non-slip surface
